

Supervisor Meeting with Alessio (Thursday, 20/08)

Find uses in the industry that are specific to Telstra; we're not going to propose "*we're going to build a medical doctor*", but we're going to propose "*we're going to find out what we're going to be building*".

- If companies tell you "*we want you to build this*", then there will be no point- they can just outsource for a cheaper price. Instead, they will tell you "*we have this problem, find a solution to it*".
- Identify a high-level problem that Telstra wants to explore... how can Telstra better use the robot in a business environment where they have a potential market? -> **PROPOSAL**
- Therefore, project proposal would be something like "*we're going to research x number of topics to define an opportunity for Telstra to use the robot; we'll provide the research, artefacts, and recommendations by the end of the project*".

In **sprint 1**, we'll define several potential opportunities and identify which one [provides the best value] by the end of the sprint.

- "*By week one, you should have identified at least **3, 4, 5 potential opportunities**. So you should have your **storyboard**, your **plan**, and the developers should have done things such as [having the **environment** ready]- they know how to do a simple hello world on the robot*".

In **sprint 2**, we're going to build a single core MVP.

In **sprint 3**, we'll take that MVP and 'beautify' it.
